

# “The ultimate demolition robot”

# World Wide and Local

## Brokk 50

the smallest model

Despite its size, the Brokk 50 is a high-capacity demolition machine. It passes through narrow doorways & can work in very limited spaces. It's perfect for smaller trimming jobs. With its low weight, it is ideal for work on weak floors. The Brokk 50 can be transported in passenger elevators & it climbs stairs. For many contractors, a favored tool which replaces hand held labor in many applications. *Applications: light demolition & trimming work, small scale maintenance & refurbishment work*

MAIN TECHNICAL DATA: Weight: 1037 lbs. / 470 kg Height min: 37 in. / 94 cm Width min: 23 in. / 58.4 cm Reach overhead 118 in. / 300 cm Hammer Size 150 ft.lbs Power Supply 480V/60Hz El. motor: 5.5Kw.

## Brokk 90

for confined spaces

The Brokk 90 is one of the most versatile demolition tools on the market. With its compact size, it is easy to transport to the job site & it even fits in most elevators. Inside the building, it climbs stairs & fits through most standard doorways. Light weight, it is a great tool for indoor demolition jobs where load restrictions & access through narrow passages are much needed. *Applications: light to medium heavy demolition work inside or outside*

MAIN TECHNICAL DATA: Weight: 2050 lbs / 930 kg Height min: 48 in. / 122 cm Width min: 30.7 in / 780 cm Reach overhead 156 in / 396 cm Hammer 400ft.lbs Power Supply 480V/60Hz El. motor: 11Kw.

## Brokk 180

the all-around machine

The most all-around machine with remarkable hitting power & stability. With all the unique Brokk features, such as low weight, compact size, high productivity, electric power, & remote control, the Brokk 180 can be used for most applications both indoor & outdoor. It is narrow enough to fit through most doorways & light enough to fit in elevators. The Brokk 180 is a truly versatile choice for any type of demolition work. *Applications: Medium to heavy demolition work*

MAIN TECHNICAL DATA: Weight: 4190 lbs / 1900 kg Height min: 54 in / 137 cm Width min: 31 in / 79 cm Reach overhead 186 in / 472 cm Hammer 600ft.lbs Power Supply 480V/60Hz El. motor: 18Kw.

## Brokk 330

the heavy hitter

Largest in the Brokk family & maybe the most powerful demolition machine on the market. Brokk 330 outperforms heavier conventional excavators & is still agile & compact enough to work in tight spaces. The strong arm allows the Brokk 330 to work with high capacity demolition tools. There is also a diesel driven version. *Applications: Heavy demolition work such as bridges, plants, vaults, dams, & many others*

MAIN TECHNICAL DATA: Weight: 9240lbs / 4191 kg Height min: 65 in / 1640 cm Width min: 60 in / 152 cm Reach overhead 264 in / 670 cm Hammer 1200 ft.lbs Power Supply 480V/60Hz El. motor: 33Kw.

# BROKK®

Founded in 1976, Brokk is today the world leading supplier of remote controlled demolition machines. Headquartered and manufactured in northern Sweden, Brokk equipment is sold world wide through a network of fully owned subsidiaries and distributors. Brokk Inc., headquartered in Monroe, Washington, services the market in North America through a direct sales force and through distributors in South America.

### TRAINING

The fastest way to success with a Brokk is initial training. Our professional trainers have many years of experience in operating, servicing, and educating customers on Brokk machines in your industry. They are there for you and ready to travel at a moments notice.

### SERVICE

As leaders in the industry, we recognize service is the key. We are therefore dedicate to provide our customers with the best possible service solutions. Our service and support hotline is open 24 hours a day, 7 days a week, ready to solve any problem. We have a team of industry leading technicians available to travel on short notice.

### PARTS

Our main warehouses in Washington and New Jersey keep an extensive inventory of parts for every machine and for every possible scenario. Parts are shipped within 24 hours to anywhere in the continental USA and Canada. On request, tailor made spare parts packages for your particular machine can be assembled.

Remote Control - Operator is safe & out of harms way

Light Weight - Low impact on floor structures

Compact Size - Fit in elevators & through doorways

Electric Power - No exhaust fumes

# “A tool for every job”

## CONSTRUCTION

Brokk is purposely built for demolition. Many contractors find the Brokk outperforms more traditional methods such as concrete sawing and drilling or hand held tools. One reason is the quick deployment of the Brokk. It can be equipped with a variety of tools, for example a crusher for silent demolition or grapples for soft demolition. Unique Brokk features like productivity, compact size, electric power, and remote control operation, makes it for many contractors a “need to have” tool.

## PROCESS

This industry provides many ideal Brokk applications like cleaning and debricking of furnaces, ladles, runners, and torpedo cars. The remote operation allows work in high temperatures and if conditions are extreme, the machine can be equipped to withstand very hot environments.

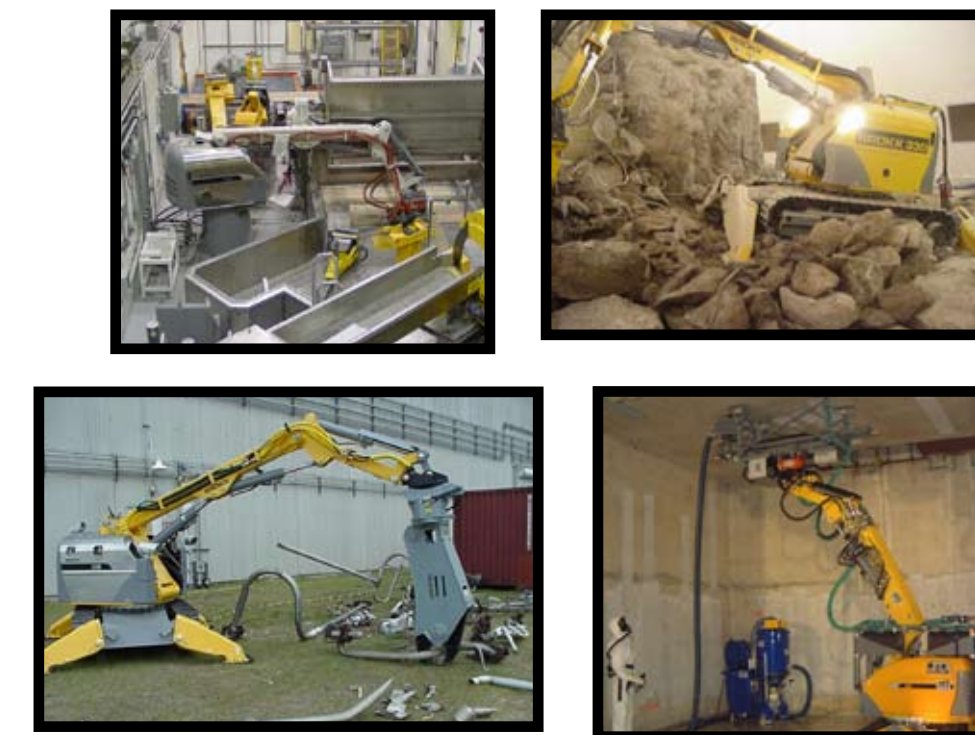

## CEMENT

Cleaning cement kilns and demolishing brick lining can hardly be done quicker and safer than with Brokk. In an industry where every hour's outage time means a loss of profitable production, the very first kiln tear out will reap close to a full return on a Brokk machine investment.

## NUCLEAR /MILITARY/SPECIAL SYSTEMS

Remote control is very well suited in nuclear and military applications. Brokk technology can be advanced with CCTV systems, remote detection, survey equipment, force feed back manipulators, and a wide variety of customized tools. Complex, dangerous, and previously labor intensive applications can with Brokk be completed safe and effectively in even the most hazardous of environments.
