

## Brokk assists in rescue operations in Russia

The Ministry of Russian Federation for Civil Defence, Emergencies and Elimination of Consequences of Natural Disasters (EMERCOM) was established in 1994. The mission of this ministry is to save lives and protect property from the effects of natural and technological disasters. Their rescue service does a professional job in the areas of disaster management and humanitarian aid and to do so, the rescue corps are armed with specialised equipment such as engineering, medical, radiation, chemical and biological protection.

Brokk is proud to be an equipment supplier to Emercom, having delivered three units of different sizes to the ministry for use at hazardous sites. The Brokk machines have been used by Emercom rescue teams in connection with fires, plane crashes, chemical accidents, opening up of bunkers containing unknown substances, and for other similar catastrophic situations and emergencies.

Several different attachments were delivered with the machines enabling destruction, digging, sorting and handling of waste material.

Brokk 110, diesel driven, with bucket

Brokk 330 with steel shear

Brokk 40 with breaker and generator set
