

*Sales, Service, Parts, Training, and Demo Rental***Only authorized Brokk distributor for USA and Canada - No others = No Confusion !**

First Brokk 260 in Canada Derrick Concrete cutting & Construction, Alberta.

In 1976 Mr. Don Moroz founded Derrick Concrete Cutting & Construction Ltd. Through the commitment to integrity, dependability, and superior quality, Derrick has since grown to an impressive 48 truck operation ranking as a top contractors in western Canada.

With the main office located in Edmonton, Alberta and two branch offices in Fort McMurray and Red Deer, this once small start-up today employs 65 people. Don Moroz always believed in hiring and training the most qualified people and providing them with state of the art equipment. In 1999 Mr. Moroz made a bold move to expand his business into refractory removal through which a full range of services to the processing industry was to be provided.

At the time of Derrick's expansion into refractory removal services, competition was fierce and Derrick looked for other ways to diversify his company and gain an edge over the competition. With Brokk 250 he found what he was searching for; a safer and more efficient method that would also give his company an edge over the competition.

With Brokk Derrick was now able to transform his business into a "one-stop-shop" by also providing Brokk breaking and removal services to his customers. The Brokk also proved to be the perfect tool for his newly started refractory removal business adding safety and productivity to the jobs.

To keep an edge over competition Derrick has since expanded the Brokk fleet with a Brokk 180 and recently with the new Brokk 260. Mr. Moroz estimates the new Brokk 260s performance at about 20% higher than the older Brokk 250 resulting in a significant productivity increase for any job. He also mentions better mobility, better stability, better breaking capability, and higher accuracy as key improvement to the new model. He says this results in better overall control of the machine.

Derrick Concrete Cutting and Constructions extensive services today includes slab sawing, wall sawing, core drilling (up to 57" in diameter), dowel drilling, hydraulic rock splitting, Vermeer wheel cutting and diamond wire sawing. The refractory removal division mainly provides cleaning of furnaces, ladles, tundishes and runners. Mr. Moroz also mentions precision demolition of refractory, castables, foundations, and other on-site structures as other profitable tasks. Despite recent world economic turmoil Derrick's business is growing at a steady pace and Mr. Moroz predicts it will continue to do so in the near future.

The name Brokk has been taken from the mythical figure Brokk, who forged a hammer for Thor, the god of war, in the realm of the Norse gods. Brokk was small but very strong, just like our machines
